

Gramatici LL(k) tari. Derivare descendent recursiva

Ce e gramatica LL(k)? - reaminitire

O gramatica independenta de context $G = (T, N, P, Z)$ este $LL(k)$ pentru un $k \geq 0$ daca pentru derivari arbitrare

$$Z \Rightarrow^L \mu X \chi \Rightarrow \mu \nu \chi \Rightarrow^* \mu \gamma$$

$$Z \Rightarrow^L \mu X \chi \Rightarrow \mu \omega \chi \Rightarrow^* \mu \gamma'$$

$$\text{unde } \mu, \gamma, \gamma' \in T^*, \nu, \chi, \omega \in V^*, X \in N$$

avem urmatoarea proprietate: $k : \gamma = k : \gamma'$ implica $\nu = \omega$

Observatie: Dependenta de μ obliga pastrarea in situatiile $[X \rightarrow \alpha.\beta; \omega]$ a contextului dreapta. Daca se elimina aceasta dependenta: gramatici **LL(k) tari**

Gramatici $LL(k)$ tari

O gramatică independentă de context $G = (T, N, P, Z)$ este o gramatică $LL(k)$ tare pentru un $k > 0$ dacă pentru derivări arbitrare

$$Z \Rightarrow^L \mu X \chi \Rightarrow \mu \nu \chi \Rightarrow^* \mu \gamma$$

$$Z \Rightarrow^L \mu' X \chi' \Rightarrow \mu' \omega \chi' \Rightarrow^* \mu' \gamma'$$

$$\text{unde } \mu, \mu', \gamma, \gamma' \in T^*, \nu, \chi, \omega \in V^*, X \in N$$

avem următoarea proprietate: $k : \gamma = k : \gamma'$ implică $\nu = \omega$

Algoritm LL(k) tare

Daca $\nu = Y\gamma$, $Y \in N$ si $\gamma \in V^*$ in loc de pasul 5 din LL(k)

- ▶ fie $q' = [X \rightarrow \mu Y.\gamma; \Omega]$
- ▶ si $H = \{[Y \rightarrow \beta_i; \textcolor{red}{FIRST}_k(\gamma\Omega)] \mid Y \rightarrow \beta_i \in P\}$.
- ▶ actualizeaza $Q = Q \cup \{q'\} \cup H$ si
- ▶ $R = R \cup \{q\tau_i \rightarrow q'h_i\tau_i \mid h_i \in H, \tau_i \in \textcolor{red}{FIRST}_k(\beta_i\gamma\Omega)\}$

se poate folosi

- ▶ fie $q' = [X \rightarrow \mu Y.\gamma; \Omega]$
- ▶ si $H = \{[Y \rightarrow \beta_i; \textcolor{red}{FOLLOW}_k(Y)] \mid Y \rightarrow \beta_i \in P\}$.
- ▶ actualizeaza $Q = Q \cup \{q'\} \cup H$ si
- ▶ $R = R \cup \{q\tau_i \rightarrow q'h_i\tau_i \mid h_i \in H, \tau_i \in \textcolor{red}{FIRST}_k(\beta_i\textcolor{red}{FOLLOW}_k(Y))\}$

Toate situatiile distincte anterior doar prin context dreapta apartin intotdeauna aceleiasi stari.

Fie G cu $P = \{$

$$\begin{aligned} Z &\rightarrow X \\ X &\rightarrow aAab|bAbb \\ A &\rightarrow a|\varepsilon \end{aligned}$$

$Z \Rightarrow X \Rightarrow aAab \xRightarrow{A \rightarrow \varepsilon} aab$

$Z \Rightarrow X \Rightarrow aAab \Rightarrow aaab$

$Z \Rightarrow X \Rightarrow bAbb \Rightarrow bbb$

$Z \Rightarrow X \Rightarrow bAbb \xRightarrow{A \rightarrow a} babb$

Este LL(1)? Este LL(2)? Este strong LL(2)?

Fie G cu $P = \{$

$$\begin{aligned} Z &\rightarrow X \\ X &\rightarrow aAab|bAbb \\ A &\rightarrow a|\varepsilon \end{aligned}$$

$Z \Rightarrow X \Rightarrow aAab \xRightarrow{A \rightarrow \varepsilon} aab$

$Z \Rightarrow X \Rightarrow aAab \Rightarrow aaab$

$Z \Rightarrow X \Rightarrow bAbb \Rightarrow bbb$

$Z \Rightarrow X \Rightarrow bAbb \xRightarrow{A \rightarrow a} babb$

Este LL(1)? Este LL(2)? Este strong LL(2)?

$Z \Rightarrow X \Rightarrow aAab \Rightarrow a**ab**$

$Z \Rightarrow X \Rightarrow bAbb \Rightarrow **b**abb$

pt LL(k) tare: $k : \gamma = k : \gamma \Rightarrow$ aceeași producție pt A ; dar aici contextul stanga contează

Strong LL(k)

NU e necesar niciun context pt a decide productia pentru nonterminalul X . Nu trebuie tinuti minte pasii anteriori din derivarea stanga, cei care au condus la nonterminalul X .

Conditia strong LL(k)

O gramatica independenta de context G este $LL(k)$ daca pentru orice pereche de productii $X \rightarrow \chi$, $X \rightarrow \chi'$, $\chi \neq \chi'$ urmatoarea conditie este adevarata:

$$FIRST_k(\chi FOLLOW_k(X)) \cap FIRST_k(\chi' FOLLOW_k(X)) = \emptyset$$

Fie G cu $P = \{$
exemplu $Z \rightarrow X$
 $X \rightarrow aAab|bAbb$
 $A \rightarrow a|\varepsilon\}$
pt $A : FIRST_2(a\{ab, bb\}) \cap FIRST_2(\varepsilon\{ab, bb\}) = \{ab\}$

LL(1) tare

Fie $Z \rightarrow E$, $E \rightarrow E + F | F$, $F \rightarrow i|(E)$

Prin eliminarea recursivitatii stanga:

$Z \rightarrow E$, $E \rightarrow FE_1$, $E_1 \rightarrow \varepsilon | + FE_1$, $F \rightarrow i|(E)$

simbol	$FIRST_1(X)$	$FOLLOW_1(X)$
E	$\{(, i\}$	$\}, \#\}$
E_1	$\{+, \varepsilon\}$	$\}, \#\}$
F	$\{(, i\}$	$\{+, \#,)\}$

Conditie LL(1) tare:

pt E_1 :

$$FIRST_1(\varepsilon FOLLOW(E_1)) \cap FIRST_1(+FE_1 FOLLOW(E_1)) = \emptyset$$

pt F :

$$FIRST_1(iFOLLOW(F)) \cap FIRST_1((E)FOLLOW(F)) = \emptyset$$

Algoritm derivator LL(1)

Convertirea automatului LL(1) in proceduri recursive: Descendenta recursiva (Recursive descent)

- ▶ derivator descendent recursiv: starea automatului este o pozitie din derivator
- ▶ stiva - locatii de unde derivatorul poate relua executia
- ▶ daca starea e $[X \rightarrow \mu.B\nu; \omega]$, $B \in N$: se pune pe stiva informatia despre $[X \rightarrow \mu B.\nu; \omega]$ inainte de a lua in considerare $B \rightarrow \beta$.
- ▶ daca folosim limbaje de programare cu suport pt recursivitate: **procedura** pt fiecare nonterminal B + mecanismul standard de **recursivitate** pentru a implementa stiva automatului

Schema de program

$q \rightarrow \varepsilon$	q: end
$qt \rightarrow q'$	q: if symbol = t then next_symbol else error; q'
	$q : X; q' : \dots$

$qt_1 \rightarrow q'q_1t_1$	proc X:
....	begin
$qt_m \rightarrow q'q_mt_m$	case symbol of
	$t_1 : \text{begin } q_1 : \dots \text{ end};$

	$t_m : \text{begin } q_m : \dots \text{ end};$
unde	otherwise error
$q = [Y \rightarrow \mu.X\nu;]$	end
	end

Reguli de transformare

1. nonterminal X - procedura X ; simbolul de start - programul principal
2. corpul functiei X :
 - ▶ ramificare case pt productiile cu X in partea stanga
 - ▶ fiecare nonterminal din partea dreapta a productiei - apel al procedurii corespunzatoare
 - ▶ fiecare terminal din partea dreapta a productiei - verificare a prezentei terminalului, urmat de apel al *next_symbol*
3. daca niciunul dintre terminalele asteptate nu e prezent - apel functia de tratare a erorilor

- ▶ Pt tranzitii $qt_1 \rightarrow q'q_1t1...$
- ▶ schema program indica:
 $q : F(); q'$
 procedura $F()$ - case pt toate t_i
- ▶ $q_2i \rightarrow q_3q_4i, q_2(\rightarrow q_3q_5($
 $q_4i \rightarrow q_9, q_9 \rightarrow \varepsilon,$
 $q_5(\rightarrow q_{10}, q_{10}i \rightarrow q_{12}q_2i, q_{10}(\rightarrow q_{12}q_2(,$
- ▶ $q_2 = [E \rightarrow .FE_1], q_3 = [E \rightarrow F.E_1], q_{10} = [F \rightarrow (.E)]$

q2: F(); q3
